Social

Formal Education Projects

Project Name : Hannin Creek Education and Applied Research Centre (HCEARC)

Project Description: We define sustainability as 'the management of our resources in a manner which does not deplete their availability for future generations'. The HCEARC is located on a watershed in a remote area of the mid-boreal forest ecosystem of central Saskatchewan, surrounded by a Provincial Game Preserve with an abundance of natural forests, wildlife, birds and fish. For over 40 years, students have participated in hands-on applied learning in sampling, data collection, testing and analysis, laboratory and field experiences, simulated investigations, wilderness survival, and applied research.

Phase 1 of the SaskPolytech/SWF partnership was the renovation of the facilities with locally resourced materials and labour. Phase 2 was construction of a wet laboratory, which allows year-round study and applied research. Phase 3 will be the development of an Indigenous encampment and outdoor learning centre for Indigenous cultural experience and study, as well as a three-season greenhouse to focus on
